

COURSE DESCRIPTION FORM

INSTITUTION National University of Computers and Emerging Sciences

BS Computer Science

PROGRAM (S) TO BE

EVALUATED

A. Course Description

(Fill out the following table for each course in your computer science curriculum. A filled out form should not be more than 2-3 pages.)

Course Code	CS1002
Course Title	Programming Fundamentals
Credit Hours	3+1
Prerequisites by Course(s) and Topics	None
Assessment Instruments with Weights (homework, quizzes, midterms, final, programming assignments, lab work, etc.)	Mid-1:15 Mid-2:15 Assignment: 20 Final:50
Course Coordinator	Muhammad Shahzad
URL (if any)	
Current Catalog Description	
Textbook (or Laboratory Manual for Laboratory Courses)	<u>Name:</u> C How to Program with an Introduction to C Global Edition - 7th Edition <u>Authors:</u> Paul Deitel, Harvey Deitel <u>Publisher:</u> Pearson <u>Name:</u> Problem Solving and Program Design in C - 7th Edition <u>Authors:</u> Maureen Sprankle , Jim Hubbard <u>Publisher:</u> Prentice Hall
Reference Material	<u>Name:</u> Working with C / Let us C <u>Author(s):</u> YashwantKanetkar <u>Publisher:</u> BPB Publications <u>Name:</u> Waite Group's Turbo C - Programming for the PC

	Authors: Robert Lafore Publisher: SAMS			
Course Goals	A. Course Learning Outcomes (CLOs)			Level
	CLO 1: Describe fundamental concepts of structured and procedural programming, use pseudo-codes and simple programs to understand control structures, iterative structures and functions using C language.			C3, PLO1
	CLO 2: Examine code writing, compiling, debugging and program execution.			C3, PLO5
	CLO 3: Justify problem solving techniques and analytical thinking by identifying the concepts and properties of algorithms.			C5, PLO2
	CLO 4: Design basic problems of the real world through small/medium size programs given as course projects.			C6, PLO5
	B. Program learning outcomes (PLO)			
	PLO 1	Computing Knowledge	Apply knowledge of mathematics, natural sciences, computing fundamentals, and a computing specialization to the solution of complex computing problems.	<input type="checkbox"/>
	PLO 2	Problem Analysis	Identify, formulate, research literature, and analyse complex computing problems, reaching substantiated conclusions using first principles of mathematics, natural sciences, and computing sciences.	<input type="checkbox"/>
	PLO 3	Design/Develop Solutions	Design solutions for complex computing problems and design systems, components, and processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.	
	PLO 4	Investigation& Experimentation	Conduct investigation of complex computing problems using research-based knowledge and research-based methods	
	PLO 5	Modern Tool Usage	Create, select, and apply appropriate techniques, resources and modern computing tools, including prediction and modelling for complex computing problems.	<input type="checkbox"/>
	PLO 6	Society Responsibility	Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal, and cultural issues relevant to context of complex computing problems.	
	PLO 7	Environment and	Understand and evaluate sustainability and impact of professional computing work in the solution of	

		Sustainability	complex computing problems											
	PLO 8	Ethics	Apply ethical principles and commit to professional ethics and responsibilities and norms of computing practice.											
	PLO 9	Individual and Team Work	Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.											
	PLO 10	Communication	Communicate effectively on complex computing activities with the computing community and with society at large.											
	PLO 11	Project Mgmnt and Finance	Demonstrate knowledge and understanding of management principles and economic decision making and apply these to one's own work as a member or a team.											
	PLO 12	Life Long Learning	Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological changes.											
	C. Relation between CLOs and PLOs (CLO: Course Learning Outcome, PLOs: Program Learning Outcomes)													
			PLOs											
			1	2	3	4	5	6	7	8	9	10	11	12
	C L O s	1	<input type="checkbox"/>											
		2					<input type="checkbox"/>							
		3		<input type="checkbox"/>										
		4					<input type="checkbox"/>							
Topics Covered in the Course, with Number of Lectures on Each Topic (assume 15-week instruction and one-hour lectures)	Week	Topics										CLO	Assessment	
	Week 1	Discussion of the course outline, Introduction to problem solving, What is algorithm, How to write pseudo code, programming structures, problem solving with the sequential structures and, Basic Flowchart, IPO and PAC										1	Announce project in 2 nd week	
	Week 2	problem solving with decisions and iterative structures, Basic Computer Organization, Intro to IDE (compiled										1,2	At least 2 Assignments	

		program, text editors, debuggers, etc), Program structure and Execution, First Program with Input and Output		
	Week 3	1. Constant, Variables, Keywords, Escape sequence 2. Format Specifiers, Data types, Data manipulation 3. Library, Linking, Compiling & Loading	2,3	
	Week 4	1. Decision Control Structures: If statements and if-else statement 2. Basic switch statements 3. Some working examples	2,3	
	Week 5	1. Nested if statements & switch statements 2. Logical & Conditional Operators 3. Working examples	2,3,5	
	Week 6	MID I Examination		
	Week 7	1. Introduction to Loops Design 2. For, while and do-while loops 3. Some working examples	2,3,5	At least 2 Assignments
	Week 8	1. Nested Loops 2. Break and Continue Statement 3. Working examples	2,3,4,5	
	Week 9	1. Introduction to 1D Arrays 2. Multiple subscripted arrays 3. Working examples	2,3,4,5	
	Week 10	1. Functions: Declaration, Definition and Calling, Passing values to functions, Passing arrays to functions 2. Standard library string functions 3. 2D array of characters	2,3,4,5	
	Week 11	MID II Examination		
	Week 12	1. Recursion 2. Introduction to Structures and Structure array 3. Working examples	3,4,5	At least 1 Assignments
	Week 13	1. Nested structures, Passing structure function 2. Introduction to pointers 3. Pointers and Arrays	3,4,5,6	
	Week 14	1. Dynamic memory allocation 2. Void pointers 3. Examples	2,3,4,5, 6	
	Week 15	Revision	3,5	Project Submissions in 12 th LAB

				and Finalization of Sessional marks	
	Week 16	Final Exam			
Laboratory Projects/Experiment s Done in the Course	There will be weekly labs starting from the first week. The following is a summary of the Lab exercises given to Students. <ul style="list-style-type: none">● Introduction to Pseudo code, Algorithm and Flowchart and Programming Fundamentals.● Introduction To Conditional Statement In C● Control Structure(Repetition)● Functions and Recursion.● Arrays (1D, 2D, 3D)● String sorting and searching algorithms.● Pointers● Dynamic memory allocation● Structures● Filing in C				
Programming Assignments Done in the Course	Assignment related to Functions, Arrays, Pointers , Structures, Dynamic Memory and File Processing will be done				
Class Time Spent on (in credit hours)	Theory	Problem Analysis	Solution Design	Social and	
	15%	50%	30%	5%	
Oral and Written Communications	Every student is required to submit at least _1_ written reports of typically _2_ pages and to make _1_ oral presentations of typically _10_ minute's duration. Include only material that is graded for grammar, spelling, style, and so forth, as well as for technical content, completeness, and accuracy.
