*The below paragraph can be used for the conclusion:*

*Celebrities do have an emotional corner, and the public should respect that. Making their broken marriages/affairs public and encashing entertainment factors is not ethical. Their profession is to entertain the masses, which they do with the help of their movies and music albums. Beyond that, it is their personal life, just like we have a personal life. They also have secrets, just like we have.*

*The media frequently violates these personality rights of an individual celebrity by associating them with products/activities that run contrary to the image created by them in the society, and hence sometimes it is against the dignity of the celebrity.*
